

# CHO-BOND® 1038 and 1121

## ONE COMPONENT ELECTRICALLY CONDUCTIVE SILICONE SEALANT (1121 VOC FREE VERSION)

### Customer Value Proposition:

CHO-BOND 1038 is a silver-plated copper filled, one-component conductive silicone. It is designed for use as a fillet, gap filler and seam sealant on electrical enclosures for EMI shielding or electrical grounding. Minimum recommended bond line for CHO-BOND 1038 is 0.007 inches (0.18mm). In addition, CHO-BOND 1038 may be used for EMI gasket repair, bonding, and attachment in applications where moderate strength (less than 150 psi) is required. CHO-BOND 1038's moisture cure silicone polymer system allows it to cure to the touch in 24 hours and provides a robust conductive and environmental seal over a wide range of application temperatures. For applications requiring zero volatile organic compounds (VOCs) or minimal shrinkage, Parker Chomerics offers a solvent free version of CHO-BOND 1038 called CHO-BOND 1121.

For best adhesion results, CHO-BOND 1038 should be used in conjunction with CHO-SHIELD 1086 primer. Typical applications include man portable electronics, radar and communication systems, EMI vents, military ground vehicles, and shelters.

### Features and Benefits:

- One component
- Silver plated copper filler
- Moisture cure silicone
- Non corrosive cure mechanism
- Medium paste
- No VOCs version: CHO-BOND 1121
- Easy to use, no weighing or mixing required.
- Excellent conductivity 0.010 ohm-cm
- 30 minute working life, rapid skin formation, 24 hr handling time, requires no pressure during curing, wide range of application temperatures. 1 week for full cure.
- No corrosive by-products generated during curing to damage substrate.
- Easy to dispense, apply and spread, can be used on overhead or vertical surfaces.
- Minimal shrinkage, no permits or ventilation required.

\* This test Method is available from Parker Chomerics.

\*\* Minimum values listed are based on using the CHO-SHIELD 1086 primer that typically comes bundled with the CHO-BOND.

\*\*\* Cure is sufficient for handling in 24 hours. Full specification properties are developed after 1 week (168 hours) at room temperature.
