

FEATURES

- Max. shift frequency of 700MHz
- Clock to Q delay max. of 1100ps
- IEE min. of -170mA
- Internal 75KΩ input pull-down resistors
- Industry standard 100K ECL levels
- Extended supply voltage option:
VEE = -4.2V to -5.5V
- Voltage and temperature compensation for improved noise immunity
- 50% faster than Fairchild 300K at lower power
- Function and pinout compatible with Fairchild F100K
- Available in 24-pin CERPACK and 28-pin PLCC packages

DESCRIPTION

The SY100S336 functions either as a modulo-16 up/down counter or as a 4-bit bidirectional shift register and is designed for use in high-performance ECL systems. Three Select inputs (Sn) are provided for determining the mode of operation. The Function Table lists the available modes of operation. In order to allow cascading for multistage counters, two Count Enable controls (CEP, CET) are provided. The CET input also functions as the Serial Data input (So) for a shift-up operation, while the D3 input serves as the Serial Data input for the shift-down operation.

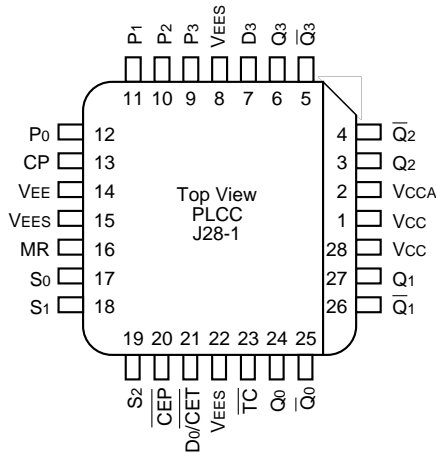

When the device is in the counting mode, the Terminal Count (TC) goes to a logical LOW when the count reaches 15 for count-up or reaches 0 for count-down. When in the shift mode, the TC output simply repeats the Q3 output.

The flexibility provided by the TC/Q3 output and the D0/CET input allows these signals to be interconnected from one stage to the next higher stage for multistage counting or shift-up operations. The individual Presets (Pn) allow initialization of the counter by entering data in parallel to preset the counter. A logic HIGH on the Master Reset (MR) overrides all other inputs and asynchronously clears the flip-flops. An additional synchronous Clear is provided, as well as a complement function which synchronously inverts the contents of the flip-flops. All inputs have 75KΩ pull-down resistors.

PIN NAMES

Pin	Function
CP	Clock Pulse Input
CEP	Count Enable Parallel Input (Active LOW)
D0/CET	Serial Data Input/Count Enable Trickle Input (Active LOW)
S0 — S2	Select Inputs
MR	Master Reset Input
VEES	VEE Substrate
VCCA	VCCO for ECL Outputs
P0 — P3	Preset Inputs
D3	Serial Data Input
TC	Terminal Count Output
Q0 — Q3	Data Outputs
Q̄0 — Q̄3	Complementary Data Outputs

PACKAGE/ORDERING INFORMATION

28-Pin PLCC (J28-1)

24-Pin Cerpack (F24-1)

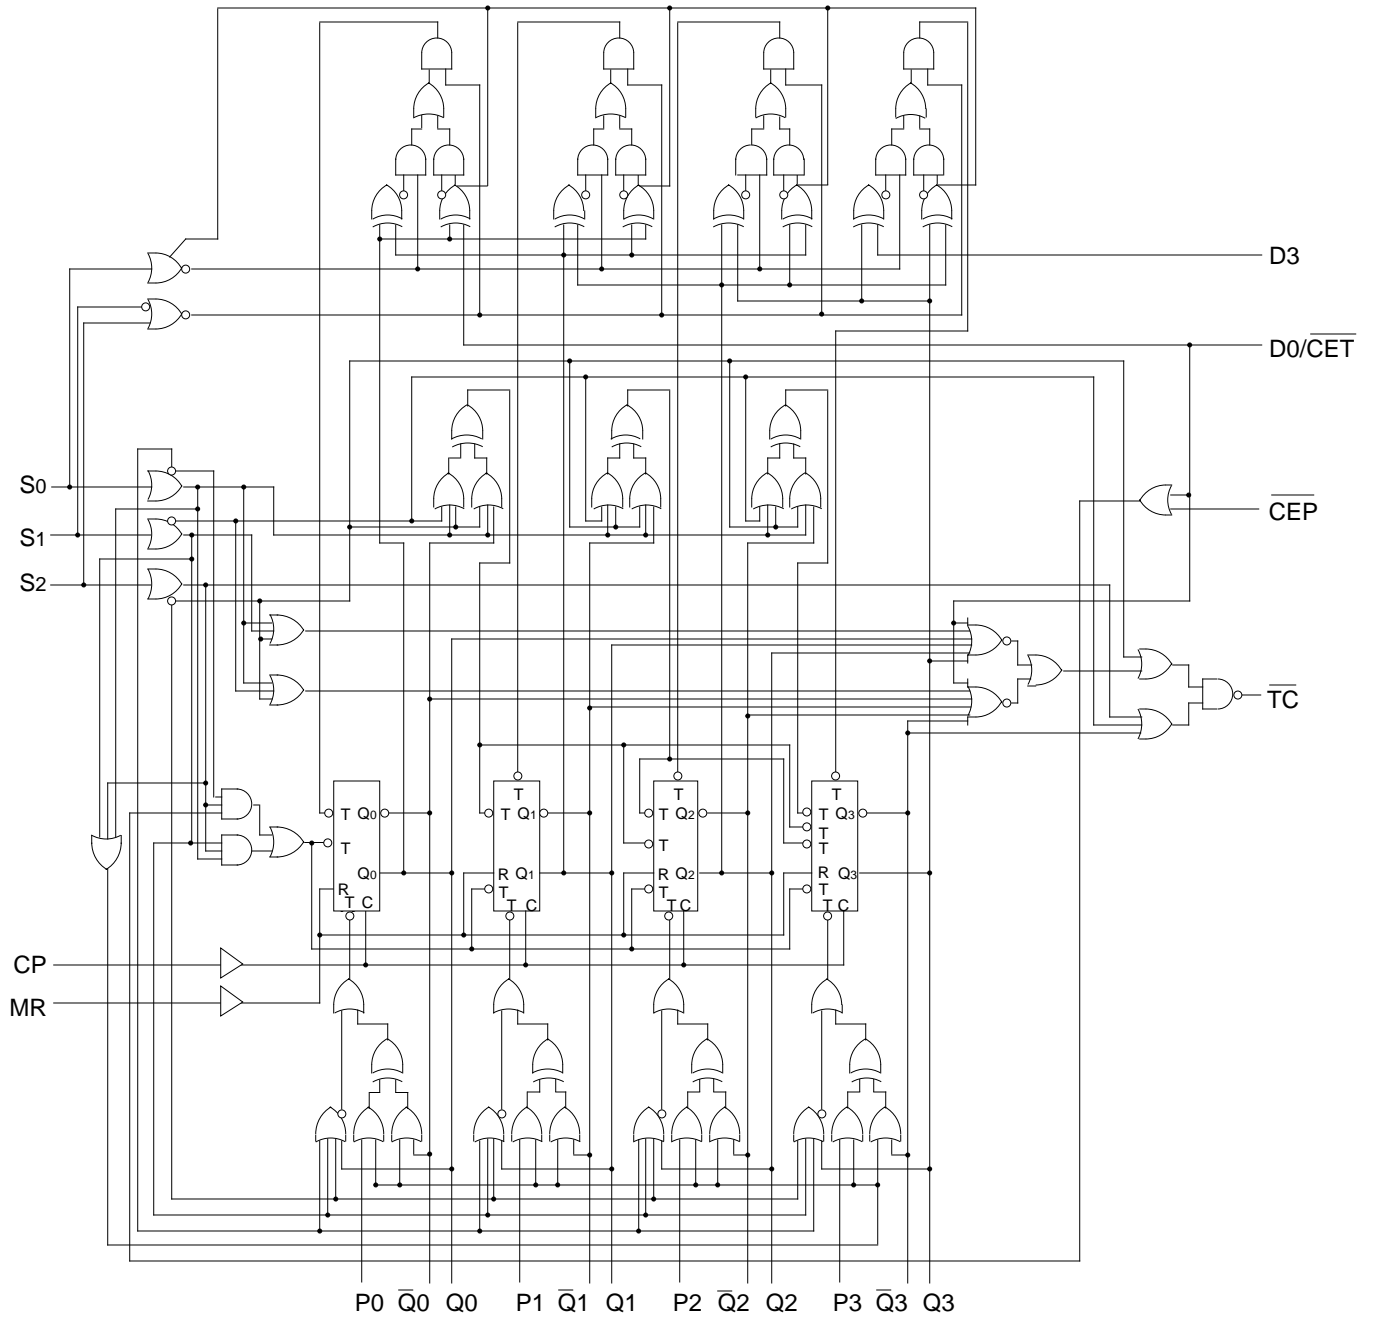

Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish

Set-up and Hold Time

Notes:

1. $V_{EE} = -4.2V$ to $-5.5V$ unless otherwise specified, $V_{CC} = V_{CCA} = GND$.
2. t_s is the minimum time before the transition of the clock that information must be present at the data input.
3. t_h is the minimum time after the transition of the clock that information must remain unchanged at the data input.

24-PIN CERPACK (F24-1)

- NOTES:**
1. DIMENSIONS ARE IN INCHES[MM].
 2. THIS DIMENSION INCLUDES GLASS PROTRUSION AND CAP TO BASE ALIGNMENT TOLERANCES.
 3. DIMENSIONS SHOWN ARE MAX/MIN, WHERE NOTED.
