## INSTRUCTIONS 4/4

### Configure Pibox Power/Reset/IR fuction

- 4.1 Insert SD card.Connect your Pibox to a monitor and Keyboard.

- 4.2 Connect your Raspberry Pi to the internet.You may access the internet via LAN or via WIFI.To configure your WIFI follow this link: <https://www.raspberrypi.org/documentation/configuration/wireless/README.md>

- 4.3 Access the Terminal of your Raspbian OS,if you are using Retropie,hit **F4** upon boot up to access the Terminal.In the Terminal,type the one-line command below:

```
curl -sSL pibox.com/install | bash
```

This will run a command that will automatically configure your Raspberry Pi to access Pibox function,you do not need reboot your Raspberry pi.

If the Pibox driver is not installed, the RESET button will not work,but the Power Button and Infrared control can also turn on/off the Raspberry Pi (about 40-60 seconds to complete the action).it will cut off the power directly, may damage the circuit board.

**Note:** When the Board is powered on/off or rebooted, the LED will blink until the action is completed.
