Relay Coupler

The universal foot of the Weidmüller **relay modules** allow them to be assembled on TS 32, TS 35 x 7.5 and TS 35 x 15 mounting rails in accordance with European standards EN 50 035 and EN 50 022.
An LED status indicator in the coil of the relay coupler indicates the relay switching status.

Contact material	Properties	Application	U/I
Fine silver	- inexpensive	universal use	1 V…250 V
AG 99 %	- average tendency to weld and average resistance to burn-off	up to medium-size loads	1 mA…5 A
	- subject to corrosion in sulphurous atmosphere		
Silver nickel	- high mechanical stability	universal use	≥ 12 V
● AgNi 0.15	- low tendency to weld	at medium-size loads	5 mA…10 A
	- low contact resistance		
	- high resistance to burn-off		
Hard silver	- mechanical stability > AgNi	for use with medium-size	≥ 12 V
AgCu3	- tendency to weld < AgNi	loads	10 mA…10 A
	- resistance to burn-off > AgNi		
	- contact resistance > AgNi		
Silver cadmium oxide	- very low tendency to weld	suitable for switching	≥ 12 V
	- resistance to burn-off > AgCu3/Ni	inductive loads	≥ 100 mA
● AgCdO			
Silver-tin-oxide	- high thermal decomposition temperature	suitable for swiching	≥ 12 V
	- more arc-resistant with low material transfer	inductive loads	≥ 100 mA
● $AgSnO_2$			
Tungsten	- very high resistance to burn-off	circuits with extremely	≥ 60 V
W	- high switching rate with short closed times	high on/off loads	≥ 1 A
Hard gold	- < lowest contact resistance	dry circuits in	µV…60 V
● AuNi	- best resistance to corrosion	damp atmospheres	µA…0.2 V

● = preferred materials

Types of contact

The standard range comprises numerous types and combinations of contacts.
1 NC (EGR EG2, EGR EG7, RS 30)
1 NO (EGR EG2, EGR EG7, DKR, RS 30)
1 NC and 1 NO (EGR EG2, WRS)
2 NO (WRS)
3 NO (WRS)
1 Changeover (EGR EG2, EGR/RST EG7, WRS DKR PRS/PRZ MCZ R, RS 30, RS 31)
2 Changeover (EGR EG2, WRS, RS 32, PRS/PRZ)
4/8/16 Changeover (RSM)

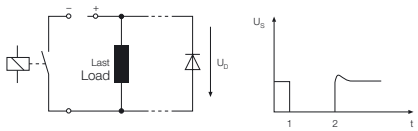
Contact material

The all-round capability of Weidmüller relay modules is achieved by the choice of the contact material.
The contact is responsible for both the reliable transmission of the control signals and for switching power contactors. Weidmüller uses gold-plated or gold-flashed AgNi contacts for most applications. Gold-plated contacts permit the switching of the low-power applications up to 40 µW with a gold-plating thicker than 2 µm. For switching higher ratings we use AgSnO2 or AgCdO contacts (RS 31).

Protective circuits of the contacts

Switching sparks may occur when switching inductive or capacitive loads that affect the operational life of the relay.
The following protective circuits offer the possibility of reducing contact wear:

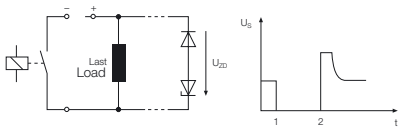
Diode:



Advantage: can be used for all ratings, low overvoltage, minimum space requirements, economic

Disadvantage: very long drop-out delay

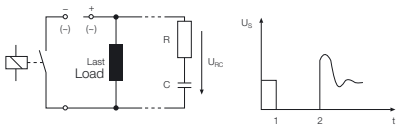
Diode and Z-diode:



Advantage: low overvoltage (determined by Z-diode), low drop-out delay

Disadvantage: not usable for high power ratings

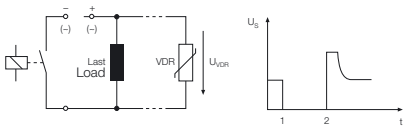
RC combination:



Advantage: low overvoltage, low drop-out delay

Disadvantage: higher current loading on contacts at switch-on, complex and expensive for increased power rating

Varistor:



Advantage: low drop-out delay, economic

Disadvantage: not for all operating voltages and power ratings

U_S	Voltage curve
1	Close
2	Open

Switching of small and large power ratings

For automation technology, Weidmüller offers the EGR EGR 7 relay coupler to switch ratings up to 40 µW under resistive loads. This allows signals to be reliably relayed to control devices.
The switching of higher power ratings in power supply technology is achieved by the RS 31 relay coupler, which guarantees switching capacity up to 3.5 kVA under resistive loads.

Relay couplers with plugged relays

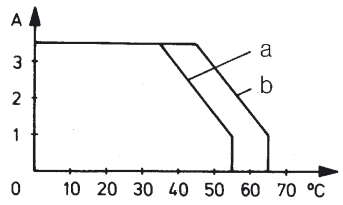
Relay couplers with plugged relays are only conditionally suitable for use in applications subject to heavy vibrations. Relay couplers with soldered relays are to be preferred.

Derating curves

The contact resistance is largely responsible for heat development within the relay. This link is demonstrated by a derating curve as a function of the permissible current subject to the ambient temperature.

We determine the current (curve a) for the following operating conditions:
- continuous operation
- rated input voltage + 10 %
- several relay modules operating under load, mounted horizontally in a row without spacing on mounting rail

A higher load is applicable when modules are mounted with a gap of 20 mm as shown in curve "b". In addition, the function of curve "b" shows the max. values for a switching or short-time operation when assembled horizontally on the mounting rail.



Notes for usage

The characteristic data of the actuation are to be meticulously observed when using UC variants in DC circuitry. UC variants have a higher current input at the moment of switching due to their series circuitry. The internal current limiter of commercially available initiators can result in the operated relay coupler not being switched through.

RC combination

Long supply cables are particularly open to electrical and electro-mechanical influences. These can lead to disturbances of the function or even failure of the relay module. A remedy for this problem is an RC combination in series that filters out unwanted disturbances. RC combinations are available for all customary relay couplers: pluggable (PLUGSERIES) or as terminal block (WDU 12C and DKU 12C).

Protective separation

All equipment required to guarantee "protective separation" must be constructed in such a way that, for example, a mechanical defect cannot reduce the level of insulation. In the case of a relay, this means that if a mechanical defect occurs (bent solder pin, break in winding conductor or broken spring), "protective separation" must be guaranteed.
Relays are specified and tested according to IEC 255 and VDE 0435. Neither standard contains any reference to
EN 50 178 (Equipping power installations with electronic equipment) nor is "protective separation" defined. To compound matters the test voltages quoted for the relays are based on different measurement conditions. The test voltages cannot be applied to EN 50 178 or DIN VDE 0106 Part 101. As more and more users employ only equipment that guarantees "protective separation", a lot of manufacturers of relays refer to DIN VDE 0106 and test their products accordingly. Consequently, the quoted values correspond to the requirements for "protective separation".

Standards

The following standards are fulfilled:
EN 50 178
Equipping power installations with electronic equipment
DIN VDE 0106 Part 101
Protection against flow of dangerous currents through the human body; basic requirements for protective separation within electrical equipment.
DIN VDE 0109
Insulation co-ordination within low-voltage system including clearance and creepage distances for assembled PCBs.
DIN VDE 0435
Electrical relays, all-or-nothing relays

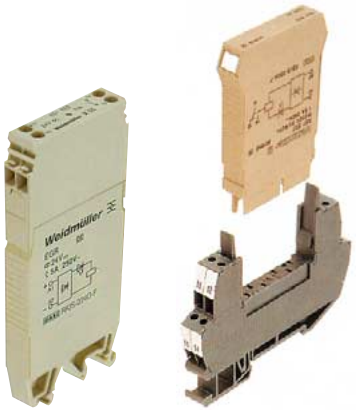
Input circuit

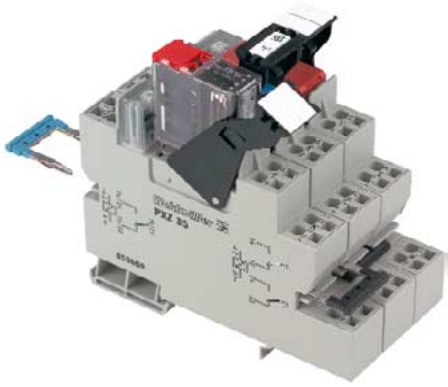
Input voltage [V]	Reference voltage at which the relay coupler operates. Typical reference voltages: => 5 V DC, 12, 24, 48, 60, 115, 230 V AC/DC
Input current [mA]	Quotient resulting from input voltage and input resistance. Input resistance => coil resistance + resistance of drive (R, LED, rect. …)
Rated power consumption [W/VA]	Input voltage x input current AC/DC with tolerance of +/- 10% or +5/-15% Typical range for relay coupler: 250 mW > Pv > 1 W 0.4 VA > Pv > 1.2 VA
Pull-in voltage [V]	Smallest input voltage that relay coupler requires in order to respond (T_{amb} = 293 K)
Pick-up current [mA]	Smallest input current required to switch relay from inoperative to operating position (T_{amb} = 293 K)
Pull-in power [W/VA]	Product of pull-in voltage and pick-up current
Drop-out voltage [V]	Voltage level at which relay has definitely released
Self reset current [mA]	Input current level at which relay has definitely released

Output circuit

Output voltage [V]	Max. voltage that can be applied to relay contact
Switching current [A]	Current that can flow for max. of 4 sec. after relay contact has closed
Continuous current [A]	Current that flows continuously after contact has closed
Switching power [W/VA]	Product of output voltage and switching current with resistive, inductive and capacitive load
Min. switching power [mW]	Smallest amount of power that can be switched via contact
Service life	Number of switching operations before contact fails - mechanical => with no electric load - electrical => with resistive or inductive AC/DC load
Pick-up lag [ms]	Length of time from application of energizing voltage until contact closes/opens
Drop-out lag [ms]	Length of time from breaking the energizing circuit until contact closes/opens
Contact bounce time [ms]	Length of time between first and last closing/opening of contact when relay picks up or drops out
Switching frequency [Hz]	Switching operations per sec. with a duty factor of 1 : 2 (t_{on} = t_{off})
Withstand voltage [kV]	Max. test voltage between input and output circuits which does not cause any discharge
Reliable separation	Feature of relay coupler that conform to VDE 0160 and VDE 0106 Part 101
Electric arc	Current flow between contact surfaces as they open, caused by ionization
Contact wear	Switching inductive loads leads to considerable changes in the composition of the materials used. The results are: => formation of pits or peaks on the surface of contacts => failure due to interlocking of contacts
Spark absorption	Limitation of transient overvoltages by connecting supplementary circuit across inductive loads => RC combinations => Z-diodes/suppressor diodes => varistors
Reduction factor	Factor by which service life is reduced when switching inductive loads

Types of Housings for Relay Coupler





Component housing EG

Weidmüller coupling modules are enclosed in housings appropriate for industrial applications. The housings are suitable for fitting onto mounting rails TS 32, TS 35 x 7.5 or TS 35 x 15 in accordance with European standards EN 50 035 and EN 50 022.

Weidmüller component housings **EG 1** and **EG 2** are 18 mm wide.

The fully enclosed EG housings are equipped with clamping yoke screw connections or push-on connections to connect conductors. Conductors with the following cross-sections can be connected:
solid core: 0.5...4 mm² or
flexible: 0.5...2.5 mm².

The component housing **EG 7** has a special status. It has been specifically designed to accommodate 10-mm slim relays and optocouplers.
EG 7 relay couplers can be optionally mounted onto TS 32 or TS 35 rails.

The RST EG 7 locking socket is also available for use with the pluggable relays couplers.

The enclosed EG 7 housing are equipped with clamping yoke screw connections.
The following conductor cross-sections can be connected:
NO/NC: 0.5...1.5 mm²
Changeover (RST): 0.5...2.5 mm².

Component housing WAVEBOX

It is important to provide modern electronics components with housings suitable for the function. Setting and operating functions must be guaranteed; technical requirements with respect to heat dissipation and EMC properties are to be supported.

An ideal design saves space and wiring costs in the switchgear cabinet. In addition, ergonomics and design are becoming increasingly important for high-quality relay coupler interfaces.

The WAVEBOX fulfils these criteria and is further distinguished by the following:

- Optimal width for any application (12.5 mm, 17.5 mm, **22.5** mm)
- Large component assembly surface; SMDs mountable on solder side
- No tools required for assembly
- Pluggable PCBs
- Pluggable cross-connection via ZQV 2.5 N
- Hinged, transparent cover
- Screw/plug and socket connector BLZ 5.08
- Optional tension clamp/plug and socket connector BLFZ 5.08
- Marking option with WS tags
- Mount onto TS 35

Connection systems
BLZ screw/plug-in connectors and BLZF tension clamp/plug-in systems for flexible conductors up to 2.5 mm², to guarantee maximum wiring flexibility.
Removing printed circuit boards
Accomplished by depressing the locking clips at the side of the headpiece, and withdrawing the terminal level and PCB from the housing. This is not permitted when the supply is connected.
Cross-connection
The ZQV 2.5 N/2 cross-connector can connect housings of the same family at the base of the housing. The cross-connection can be loaded with a current of up to 8 A. This allows the supply voltage to be cross-connected from one electronics module to another.
The voltage at the cross-connection must not exceed 50 V.
Ventilation vents
Ventilation vents, arranged at an angle, temper and ventilate the lower side of the housings.

Modular system PLUGSERIES/PLUGRELAY

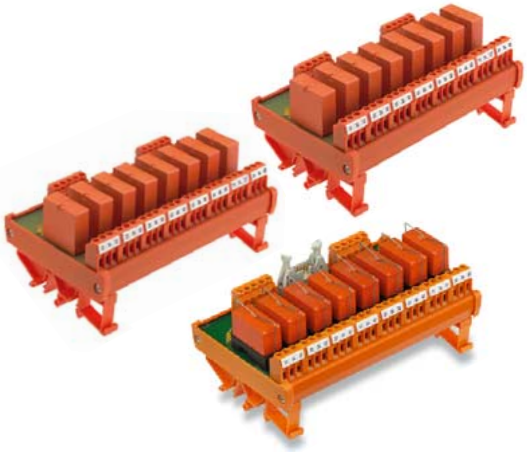
is a new generation of pluggable relay couplers. The core of this system is an innovative relay socket **PXS** or **PXZ**.
Weidmüller has combined the functionality and experience from its relay and terminal block business in this product.
The PLUGRELAY is the ideal connection technology between the relay and the application.

Modular system principle

The PLUGSERIES is particularly service friendly.
Commercially available relays are plugged; retainer and release clips ensure stability, LED indicators with free-wheeling diodes can be easily plugged.

- Relays can be easily plugged
  - suitable for small electric circuits standard design and BGD
- Independent connection technology: screw or tension clamp rated cross-section 0.5...2.5 mm²
- Robust design of retainer / release clip
- One or two changeover contacts Max. current switched 16 A
- Low wiring costs thanks to ZQV 25N cross-connectors (pluggable)
- Service-friendly modular system
  - relay socket, LED indicators, retainer clips and relays
  - mount onto TS 35
  - marking options with WS markers on retainer clips
- Pluggable LED indicator with free-wheeling diode

Types of Housings for Relay Coupler



Weidmüller RS locking socket

Locking sockets with relays RS 30, 31, 32 are either 11.2 mm or 25 mm wide depending on version. The open profile makes the use of pluggable relays possible.
Modules mounted onto the locking sockets are provided with clamping yoke screw connections or push-on connectors for wiring conductors.
Conductors with the following cross-sections can be connected:
solid core: 0.5...4 mm^2
flexible: 0.5...2.5 mm^2.

Locking sockets with multiple interfaces

RSM multiple interfaces can be optionally assembled with 4, 8 or 16 relays.
To save wiring costs on the input side, variants are offered with joint positive and negative potentials.
The PCB connectors are provided with clamping yoke screw connections for conductors with the following cross-sections:
solid core: 0.5...4 mm^2 or
flexible: 0.5...2.5 mm^2.
Some versions of the RSM coupler have a male connector block available for connecting pre-assembled cables on the input side in accordance with IEC 603-1/DIN 41 651.

Minicoupler DK

All DKR mini coupler components fulfil demands for slimmest possible design. The sensational width of only 6 mm is achieved by using state-of-the-art surface mountable components SMDs. 4 and 5 screw-connections are offered for 0.5...4 mm^2 conductor cross-sections. The mini couplers offer a wide spectrum for coupling digital sensor/actuator signals between automation devices and the field process. DKR relay couplers can receive and standardise signals with varying voltages from the field.

Miniconditioner MCZ

The 6-mm MCZ housing is one of the slimmest of its kind. It has the following distinguishing features:
- Z-spring reduces mounting costs
- integrated cross-connection options in the input and outputs minimise wiring costs

MCZR miniconditioner (relay coupler) are available with 4 or 5 Z-spring connections. The clampable conductor cross-section is 0.5...1.5 mm^2.

MICROSERIES

The relay coupler and optocoupler variants from the **MICROSERIES** are used in applications in industrial automation to isolate and couple digital input and output signals. Their compact design means that they are particularly suitable for use on sub-distribution boards as well as in switchgear cabinets where they help the user to make optimum use of valuable switching space. With its compact design, the **MICROSERIES** elegantly combines the functionality of the classic coupling level and the terminal level.

- 6.1-mm mounting width
- Pluggable cross-connections of four potentials in the inputs and outputs
- Proven cross-connection system ZQV 4 N
- Wide input voltage spectrum from 5 ... 230 V
- LED-indicator reverse-connect protection free-wheeling diode
- Housing material: WEMID Flammability class: V0 in accordance with UL 94
- Innovative retaining and release system
- Marking surfaces for fitting standard WS 12/6 markers

CE-marking

Weidmüller relay couplers are marked with the CE symbol and comply with the requirements of EN 50 081 Part 1 and EN 50 082 Part 2. They can therefore be used for both industrial as well as for applications in residential, commercial and light industry.

Appropriate ESD measures should be taken during installation. If supply cables are particularly long, overvoltage protection should be provided to prevent interference from electrical disturbance in the atmosphere.

This module can be used as a universal interface between the controller and actuator for switching medium-sized loads.

- Reduces installation and commissioning times by use of the proven Z-spring connection technology
- Pluggable cross-connections in input and output minimise wiring costs
- 6-mm width

[1]) depends on load conditions

* the hard-gold plating is resistant for parameters 36 Vdc, 50 mA with 10^6 cycles

WAVESERIES Relay Coupler in Component Housings

With 1 changeover contact

Relay couplers in the WAVEBOX
- Independent connection technology
  - pluggable connection unit screw or tension clamp technology
- Fast commissioning and after-sales-service service
  - pluggable PCBs
- Save wiring tasks
  - cross-connections possible at input and output

Relay Couplers in Components Housings EG 7

- Plugs on to locking socket RS EG 7 with combination foot TS 32, 35
- Overall width: 10 mm
- With combination foot for TS 15, TS 32 or TS 35
- Versions with 12 V, 24 V and 48 V fulfil protective separation in accordance with VDE 0160, Part 101
- **All EGR EG 7 and RST EG 7 are approved by Germanischer Lloyd. Approval No. 35962 HH**

1) Serves only as a spare part for NO and NC

2) The following ratings can safely be switched:
a) 100 mV…60 V ac/dc/100 µA…300 mA
b) 5 V… 24 V dc/10 mA… 1.2 A
c) 24 V ... 60 V dc/10 mA... 500 mA
d) 10 V…250 V ac/10 mA… 5 A

After switching higher powers (b…d) lower powers (a) can no longer be switched.

PRZ/PRS

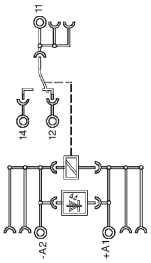
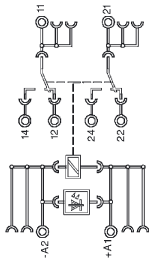
PRS/PRZ xxx 1CO



PRS/PRZ xxx 2CO



- Modular system comprising:
  - Relay socket for mounting rails
  - LED indicator unit / RC combination
  - retainer clip
  - pluggable relays
- Independent connection technology: screw or tension clamp technology
- Compatible with low power relays type RT / Standard with 1 or 2 CO contacts
- Coil and root-contacts cross-connectable with cross-connection type ZQV 2.5 N
- Available as complete module or as spare parts

Technical data		
Contact number and type		1 changeover contact or 2 changeover contacts
Contact material		AgNi 90/10, AgNi 0.15 htv
Switching current		16 A 1We/2 x 8 A 2We
Switching voltage		250 V ac
Braking capacity		4 kVA
Min. switching current / braking capacity		10 mA /100 mW
Min. braking capacity AU contact		40 µW
Rated consumption		400 mW dc/0.55 VA ac
Dielectric strength Sp./Kont.		5 kV
Response / drop out time:	DC coil	typ. 7/3 ms
	AC coil	9/45 ms
Bounce time NO contact/normally closed contact		typ. 1/3 ms
Mechanical service life:	DC coil	> 30 x 10^6 switching operations
	AC coil	> 30 x 10^6 switching operations
Braking capacity	1-pole DC 13	1.25A, L/R = 80 ms 2.3 x 10^5
	2-pole DC 13	1.25A, L/R = 80 ms 2.8 x 10^5
	2-pole AC 15	1.2A, cosL/R = 0.3 6050x

Miscellaneous data		
Protection class		IP 40
Flammability class UL		V0
Ambient temperature	DC coil	-40°C ... +85°C
	AC coil	-40°C ... +70°C
Weight		14 g
Approvals		UL, CSA, VDE, ÖVE

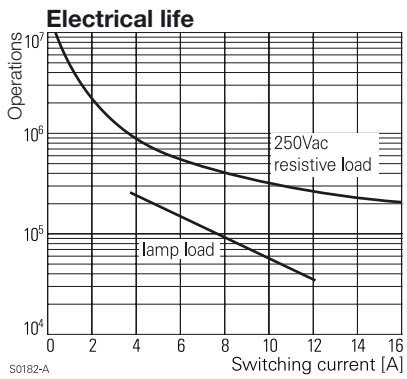
Power relay RP 3SL



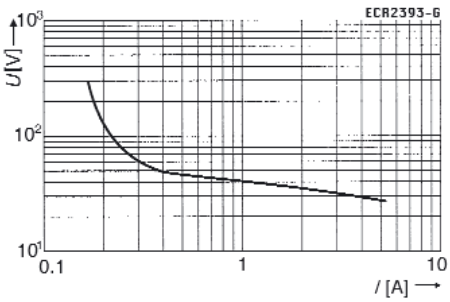
MICRORELAY MRS/MRZ

MRS 5 Vdc 1CO **MRS 12 Vdc 1CO**
MRZ 5 Vdc 1CO **MRZ 12 Vdc 1CO**

This module can be used as a universal interface between the controller and actuator for switching small to medium-sized loads.

- Pluggable cross-connection in the input and output reduces wiring costs
- 6-mm width
- Flexible thanks to screw and tension clamp connection versions

Limit diagram



Current temperature-rise curve

Technical data (of relay manufacturer)	
Contact number and type	1 changeover contact
Contact version	Single contact
Switching current	6 A
Switching voltage / max. Switching voltage	300 Vdc / 400 Vac
Braking capacity	1500 VA
Contact material	$AgSnO_2$
Recommended min. load	≥ 100 mA, 12 V
Typ. bounce time NO contact	1 ms
Typ. bounce time normally closed contact	5 ms

Miscellaneous data	
Flammability class UL	V-0
Ambient temperature	-40 ... +85 °C
Max. switching operations with rated load / without load	6/1200 switching operations per minute
Response / drop out time	5 / 2.5 ms
Bounce time NO contact / normally closed contact	1.5 / 5 ms
Protection class Housing	IP 67

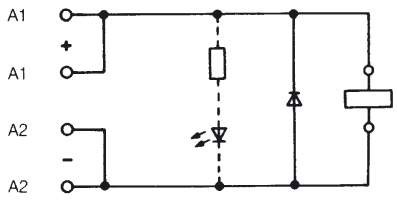
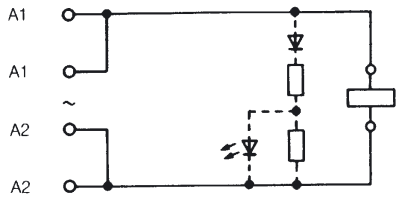
Relay Socket Module for Industry Relays

Weidmüller relay sockets for mounting rails enable plug-in relays most commonly used in industry to be mounted; they make possible installations in which the control section and power section are perfectly separated. The coil terminals and the connection terminals are located on opposite sides of the locking socket modules.
The conductors are connected via screw terminals; the securing in the terminal is achieved by a clamping yoke system. This method has been used by Weidmüller for many years, and is the only method that guarantees a reliable connection in industrial applications.
Thanks to their combination foot, these modules can be mounted onto TS 32, TS 35x7.5, TS 35x15 mounting rails in accordance with European standards EN 50035 and EN 50022.
The connections are marked according to European Standard EN 50005. The modules are designed for DC relays (with a damping diode parallel to the coil, as well as a protection diode for reverse polarity protection) and AC relays.
They can be provided with an LED on request.



DC voltage



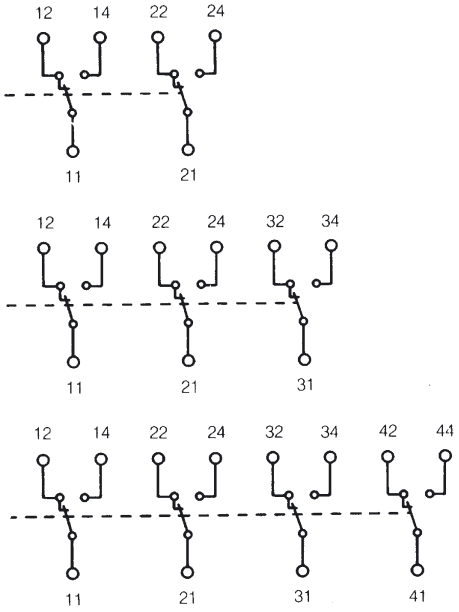
Ac voltage

The input terminals are doubled, in order to pick off the poles. Note the following for DC current operation:

A1 = +

A2 = –

The contacts available at the output are: 2, 3 or 4 changeover contacts.
The marking of the contacts in the following diagram corresponds to European standard EN 50005.



The standard range of relay socket modules is divided as follows:

Group 1:

RS 3 (2 changeover contacts)
RS 4, RS 14 (4 changeover contacts)
For relays of the type “international”

Group 2:

RS 6 (2 changeover contacts)	Size 1
RS 7, 17 (3 changeover cont.)	Size 2
RS 8, 18 (4 changeover cont.)	Size 2
RS 9 (2 changeover cont.)	Size 2

For relays of the type "European". Relays with 4 changeover contacts (size 2) can be secured to RS 7, RS 17 and RS 9; however, only 3 or 2 changeover contacts are connected to the terminals, which results in space savings.

Group 3: RS 21 (2 changeover contacts)
RS 23 (3 changeover contacts)
RS 24 (2 x 3 changeover cont.)

For relays with one socket with 8 or 11 pins.

The table on page 87 offers an overview of the most important manufacturers of relays in groups 2, 3 and 4. The list is provided for information purposes only, and does not claim to be complete

List of Plug-in Relays for Weidmüller Relay Socket Modules

Opto-coupler

Opto-coupler

With increasing automation, potential separation between the control and field sides of circuits is becoming increasingly important. The control unit being the core of the automation must be electrically safe and free from feedback when coupled with the various sensors and actuators. Opto-coupler are being used in a growing number of applications. They offer the necessary safety and have further advantages such as:

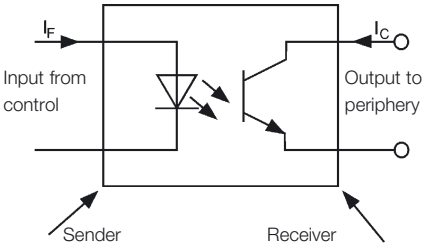
- low power uptake on control side
- high switching frequency
- no contact bounce
- wear-free switching
- insensitive to vibration
- use independent of location
- no mechanical parts
- long life
- high insulation voltage

Because of these features, opto-coupler are an alternative to conventional, mechanical relay interfaces.

For industrial usage, Weidmüller offers modules with various input voltages and housings.

Basic construction of the opto-coupler interface:

The heart of the system is the opto-electronic component (opto-coupler) that effects the coupling.



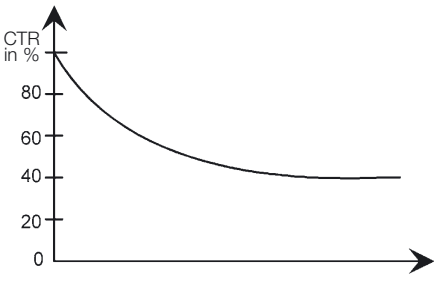
An important parameter of this type of modules is the CTR = current transfer rate.

The CTR is given in % and is the ratio between the input current IF and the maximum available output current IC.

Example: IF = 10 mA; CTR = 100%
=> IC = 10 mA.

The CTR is affected by a number of parameters such as:
- Ambient temperature
- efficiency of the luminescence diode
- geometric dimensions within the module

It also drops with time. The result is that the switching levels change due to ageing.



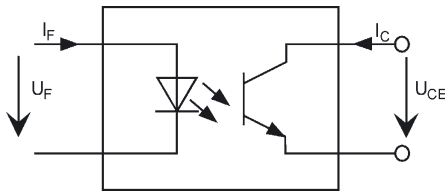
CTR as a function of operating life

To eliminate these effects where possible, Weidmüller opto-coupler use almost exclusively semiconductors which have a long life in terms of CTR.

Moreover, the insulation of a module is highly important, since the actual coupling of the input and output circuits takes place optically. Thus the optical component has to guarantee separation of both circuits even in case of a defect.

Weidmüller opto-coupler comply with DIN VDE 0884 to provide a maximum level of safety.

Appropriate switching circuits need to be included to ensure that the entire component provides reliable separation in accordance with DIN VDE 0106, Part 101.



Circuit diagram of an opto-coupler

Opto-coupler for protective separation or galvanic isolation

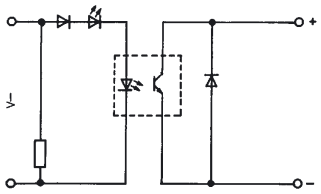
The most important precondition for achieving protective separation with opto-electronic coupling modules is the partial discharge test in accordance with DIN VDE 0884. Double or reinforced insulation for protective separation must be discharge proof. High voltage tests, as are usual with relays, cannot be carried out with semi-conductors, because they could lead to the destruction of the semi-conductor. Safe separation for the given rated voltage is applicable to coupling modules that are integrated into opto-couplers if:

- the opto-couplers are tested according to DIN VDE 0884
- clearance and creepage distances on the PCB and connection elements correspond to EN 50 178, DIN VDE 0106 and 0109.

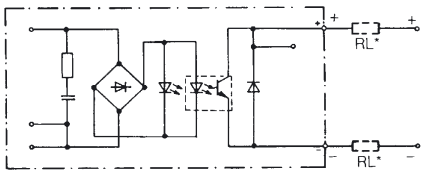
Control side of the opto-coupler interface

3 basic circuits are to be differentiated on the input side of the opto-coupler#s interface:

- as a pure **DC input** with polarity protection diode wich prevents the opto-coupler from being destroyed if the input polarity is reversed.

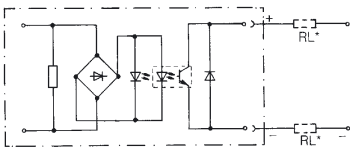


- as an **AC/DC input:**



Wrong polarity of the DC input signal is not possible with this switching.
The disadvantage of an AC/DC input circuit (driven by DC signal) is the low switching rate since the charging capacitor (CL, necessary for AC-input signal) lowers the max. switching rate.

- pure **AC-Input:**



* Sample circuit

Here, too, the charging capacity lowers the max. switching rate considerably.
Weidmüller opto-coupler with AC/DC or AC input signals are designed for 40…60 Hz power supply.
With AC-signal input the max. switching rate is below half the power supply frequency.
A high switching rate is not possible, otherwise continuous switching in tune with the power frequency would occur.

Output side of the opto-coupler

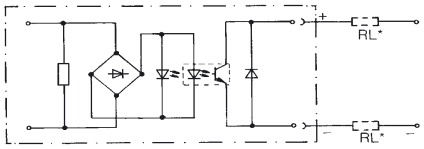
Weidmüller opto-coupler are designed and sized for a wide variety of applications. Demands regarding the load side of opto-couple modules could be:

- power amplification
- signal conditioning
  AC/DC, DC/AC
- short-circuit protection
- interference proof, etc.

To fulfil these requirements, the opto-coupler must contain additional electronic components which determine the functionality of the opto-coupler.
Thus there are 2 basic output variations for opto-coupler

Output as
- 2 pole and
- 3 pole circuits

2-pole DC output



* Wiring example

The 2-pole DC output is comparable to a conventional switch. With this type it is immaterial where the load is in the output circuit. It is, however, important to provide the necessary output supply voltage with the right polarity.

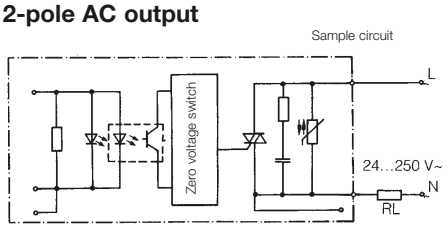
Opto-coupler

Opto-couplers are normally given with an output voltage supply from 5…48 VDC. These values should not be cut or exceeded on any occasion.

The load current should not be higher than the stated max. output current. Continuously exceeding this value will destroy the output stage.

The derating curve shows the dependency of the output current as a function of the Ambient temperature (see under the respective product on the following pages).

2-pole AC output

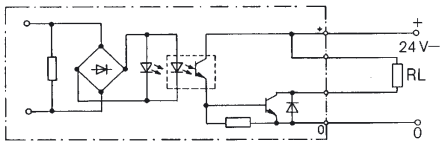


A special semiconductor element (TRIAC) in the output stage of the opto-coupler is used to switch AC voltages.

As for the DC-versions the appropriate parameters (such as voltage, frequency, max. load current, ambient temperature) should be given consideration.

A neutral voltage switch ensures that the load is switched only in the voltage zero. To protect against voltage spikes, the modules are allways fitted with appropriate protection elements (varistors, RC-combination).

3-pole DC output



This type of output stage requires for safe function a potential-linked output voltage supply with an output that is either positive switching (common reference potential is GND or 0 V) or negative switching (common reference potential is the positive voltage pole).

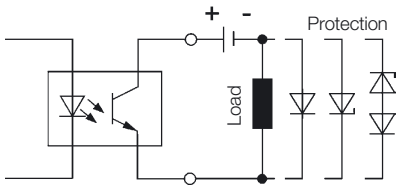
Standards

Weidmüller opto-coupler comply with the following standards:
EN 50 178
Furnishing of power engineering systems with electronic equipment
DIN VDE 0106 Part 101
Protection against flow of dangerous currents into the human body; basic requirements for reliable separation within electrical equipment.
DIN VDE 0884
Optoelectronic coupling devices for reliable separation
DIN VDE 0109
Insulation coordination within low-voltage system including clearance and creepage distances for equipment

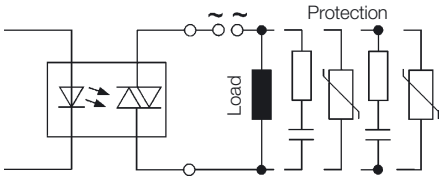
Protective circuit

All opto-coupler have a protective circuit in the output (generally a free-wheeling diode).

To prevent decoupling of interference signals to other leads the load side should be protected.

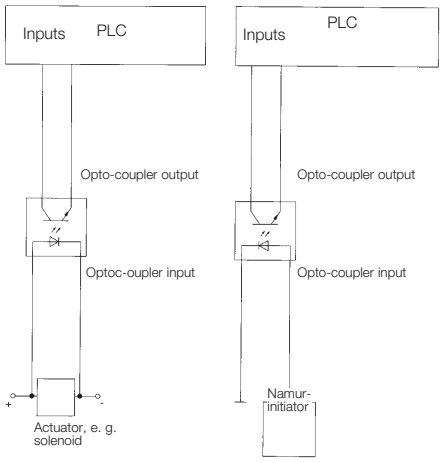


Protective circuit for DC output



Protective circuit for AC output

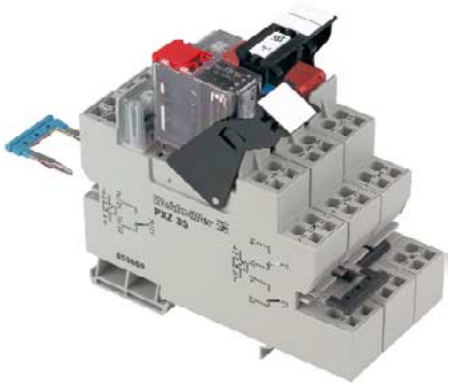
Application example



Monitoring an actuator

Position monitoring with namur intiator

Types of housing for opto-coupler



Weidmüller coupler modules are enclosed in housings that are appropriate for industrial applications. The housings are suitable for fitting onto mounting rails TS 32, TS 35 x 7.5 or TS 35 x 15 in accordance with European Standards EN 50 035 and EN 50 022.

Component housing EG

Weidmüller component housings **EG 1** and **EG 2** are 18 mm wide. The fully enclosed EG housings are fitted with clamping yoke screw connections or push-on blade connectors for attaching wires. Conductors with the following cross-sectional dimensions can be connected:
solid conductors: 0.5…4 mm² or
flexible conductors: 0.5…2.5 mm².

The component housing EG 7 has a special status. Is has been specifically designed to accommodate 10-mm slim opto-couplers.
EG 7 opto-coupler modules can be mounted onto TS 32 or TS 35 rails.
The RS EG7 locking socket is also available for the OST opto-couplers.

The fully-enclosed EG 7 housing is fitted with clamping yoke connections.
Conductors with the following cross-sections can be connected:
Component housing EG7: 0.5…1.5 mm²
Locking socket: 0.5…2.5 mm².

Component Housing WAVEBOX
Component housing WAVEBOX
It is important for modern electronics to create a functional housing. Setting and operating functions must be guaranteed, technical demands regarding heat dissipation and EMC properties are to be supported. The ideal design saves space and mounting costs in the switchgear cabinet. Moreover, ergonomics and the design are gaining in importance for high-quality opto-couplers interfaces. The WAVEBOX fulfils these criteria and has the following distinguishing features:
The WAVEBOX is characterised by:
- Optimal width for any application (12.5 mm, 17.5 mm, **22.5** mm)
- Large component assembly surface; SMD's can be mounted on the solder side
- No tools required for assembly
- Plug-in printed circuit board
- Plug-in cross-connection via ZQV 2.5 N
- Hinged, transparent cover
- BLZ 5.08 screw/plug and socket connector
- BLFZ 5.08 optional tension clamp/plug and socket connector
- Marking option with WS tags
- Suitable for snap-fitting on TS 35

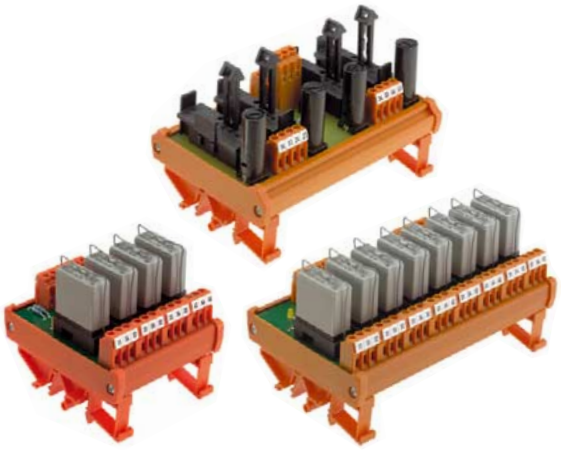
Connection systems
Available are BLZ screw-type connectors as well as the BLZF tension clamp system for up to 2.5 mm² flexible conductors for maximum wiring flexibility.
Printed-circuit board removal
This takes place by pushing in the locking hooks in way of the cover and with drawing of the terminal level and printed circuit board from the housing. This must not take place with the supply connected.
Cross-connection
Housings of the same family arranged side by side, can be cross-connected in the base of the housing with the ZQV 2.5 N/2 cross-connector. The cross-connection can be loaded with a current of up to 8 A. By means of this arrangement, the supply voltage can be cross-connected from one electronic module to another. The voltage transferred from the cross-connection to the terminal level must not exceed 50 V.
Air vents
Slanted air vents control the temperature and ventilate the housing base.

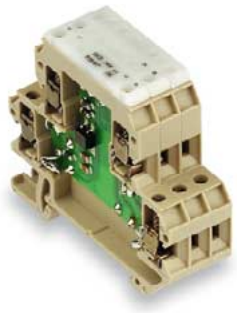
Modular system PLUGSERIES/PLUGopto
is a new generation of pluggable SSR. The core is an innovative relay socket **PXS** or **PXZ**.
Both products combine Weidmüller functionality and experience gained from the relay and terminal business.
The PLUGopto is the ideal connection technology between SSR and the application.

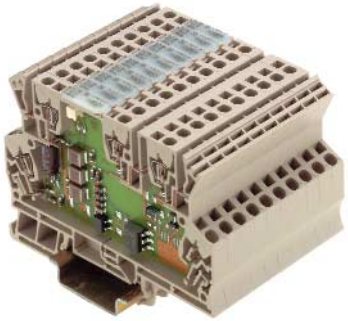
Modular principle

The new PLUGSERIES is particularly service friendly. Commercially available SSRs are simply plugged: holding / dismounting clamps guarantee secure mounting; LED indicators with free-wheeling diode can be simply plugged.

- Easy plugging of SSR
  - suitable for the standard design and RT
- Independent connection technology: screw or tension clamp
  Rated cross-section 0.5 2.5 mm2
- Robust holding / dismounting clamp
- Control voltage 24 Vac/Vdc
- Rated switching voltage 24 Vdc, 24 Vac/Vdc, 230 Vac
- Up to 5 A continuous current
- Low wiring costs thanks to ZQV 2.5N (pluggable) cross-connectors
- Service-friendly modular system
  - relay socket, LED indicator
  - holding clamp and SSR
  - mount onto TS 35
  - marking options with WS marking tags and holding clamps
- Pluggable LED indicator with free-wheeling diode







Weidmüller locking socket RS

The locking socket with opto-couplers RS 40 have a width of 11.2 mm. The modules on locking socket profiles are equipped with clamping yoke (screw connection) units for conductor connection.
Connectable are:
solid conductors: 0.5…4 mm²
flexible conductors: 0.5…2.5 mm².

Locking socket with multiple interfaces

Multiple interfaces RSM are optionally available assembled with 4, 8 or 16 pluggable opto-couplers. Versions are available with joint positive and negative potentials in order to reduce wiring on the input side.
PCB clamping yoke screw connecter elements have clamping yoke units for connecting conductors with the following cross-sections:
solid conductors: 0.5...4 mm²
flexible conductors: 0.5...2.5 mm²

Variants of the RSM couplers have male connector blocks on the input side for connecting pre-assembled cables, in accordance with IEC 603-1/DIN 41651.

Mini-coupler

All parts of the mini-coupler DKR and DKO meet the specifications for a design that is as slim as possible. The sensational width of a mere 6 mm can be achieved by employing the latest surface-mounted devices (SMD). There are 4 or 5 screw connections available which accept conductors with cross-sectional dimensions from 0.5…4 mm². The mini-coupler offer a wide range of options for coupling digital sensor/actuator signals between automation devices and the process stage. With DKO opto-coupler, signals from the field with different voltages can be picked up and unified.

Miniconditioner MCZ

The MCZ-housing is distinguished as one of the slimest component-housings. A tool width of only 6 mm reduces space requirements in cabinets.
The MCZ is characterized by:
- Tension-clamp connection
- integrated cross-connection option for input and output minimise wiring costs.

The mini conditioner MCZO (opto-couplers) have 4 and 5 Z-tension spring connections. The clampable conductor cross-section is 0.5...1.5 mm².

CE-marking

Weidmüller opto-coupler are marked with the CE symbol and comply with the requirements of
EN 50 081 Part 1 and EN 50 082 Part 2. They can therefore be used for both industrial as well as for commercial and light industry.

Appropriate ESD measures should be taken during installation. If connecting wires are particularly long, overvoltage protection should be provided in order to prevent interference from electrical disturbance in the atmosphere.

Schematic circuit diagram

This module can be used:
- between controller and sensor, for feedback of different statuses.
- for direct switching of load currents up to a Adc, but also provides "online" information about the behaviour of the load current.

The MCZ-O modules do have following features:
- Reduction of installation- and power-up times by using the proved tension-clamp technology
- Pluggable cross-connection units in the input side reduce wiring costs
- 6 mm width

Opto-coupler in component housing mini coupler DK

Opto-couplers DKO S0 signal sensor

Application example:
Signals for consumers are normally transferred via an interface. Generally, this interface must conform with DIN 43867 (interface for signal transmission). There must be a differentiation between the passive interface and active S0 interface. The actual signals, that are correspondingly proportional to the relevant consumption (electrical energy, gas consumption, water, district heating, etc.) are shown at measuring sensors (electric meter, etc.) The interface itself is purely passive (acceptor) and must be supplied via a source. The source for providing the current is built into the active interface. The following threshold values are specified:
I_{max} = 27 mAdc
U_{max} = 27 Vdc
f_{max} = 16.66 Hz
For the recognition of the corresponding consumption signals, the following currents are integrated:
ON (active) -> 10…27 mA
Off (inactive) -> 0…2 mA
The module accepts the input from the signal sensor and outputs the opto-decoupled output signal, i. e. galvanically isolated.

Opto-coupler in component housing WAVESERIES

Opto-couplers WAVESERIES

Opto-coupler in WAVEBOX:

- Independent connection technology
  - pluggable connection unit optionally available with screw or tension clamp connection technology
- Fast commissioning and after-sales service
  - pluggable replacement PCBs
- Save wiring
  - cross-connection option at input / output
- Fast switching
  - high frequency output, up to 100 kHz
- Reliable power output
  - short-circuit and overload proof
- Space-saving components
  - 4-channel opto-couplers

Opto-coupler in component housing EG5

power opto-couplers

With "online" check-back indication of the load ratio

- Power opto-couplers for load currents up to 4 A.
- Short-circuit proof
- Patented "online" load indication and check-back indication
  - optical indication
    status indication via 3-coloured LEDs
  - electrical indication
    2-bit "online" data signal for check-back indication of the load performance to a PLC or similar
- Module fulfils protective separation in accordance with VDE 0106 Part 101 and EN 50 178 (rated voltage 300 V)
- Internal opto-coupler according to with DIN VDE 0884
- Insulation voltage 4 kV_{eff}
- Clearance and creepage distances ≥ 8 mm

Ordering data	Type	Cat. No.
	EGO 5 PKR	**8220870000**

Rated data	
Input	Screw connection 0.5…4 mm^2
Input voltage	24 Vac/dc, min 20 Vac/dc, max 30 Vac/dc
Input current (at U_N)	12 mA (24 Vdc) 13 mA (24 Vac)
Rated input consumption	195 mW, 220 mVA
Max. input frequency dc	≤ 30 Hz, switching ratio 1 : 2
Typ. switch-on delay	2 ms
Typ. switch-off delay	7 ms
Max. input frequency ac	≤ 10 Hz
Output	Screw connection 0.5…4 mm^2
Supply voltage	20…30 Vdc
Max. output current	4 A
Reverse polarity protection	present
Short-circuit conditions	short-circuit-protected (switches output off immediately; auto switch-on when short-circuit eliminated)
Thermal short-circuit	≤ 12 A. output switches off and on again automatically after certain time.
Load Indication LI 1, LI 2	
Supply voltage	5…48 Vdc
Max. current	100 mA
Max. voltage drop	1.6 V
Storage temperature	–40 °C…+60 °C
Ambient temperature	
- rowed on mounting rail without clearances	–20 °C…+40 °C
- rowed with clearances	–20 °C…+50 °C
Insulation coordination EN 50 178	
Overvoltage category	IV
Pollution severity	2
Accessories, dimensions and connection data see	Page 307, Fig. VII

[1]) Error: short-circuit, overload, over- or under voltage at output, overtemperature in the module

[2]) Open load: Underload recognition at active input: type 500 mA (max. 1.5 A) at 25 °C. Open load wil be indicated at I_{Load} ≥ 500 mA depending on switching status.

Opto-coupler in component housing EG7

power opto-couplers

– Pluggable on socket RS EG 7 with combination foot TS 32, 35
– Overall width **10 mm**

OST EG7 2 A

- Short circuit protected and over load-safe output
- 3-colour status-LED for output current indication
- Reliable separation acc. to DIN VDE 0884

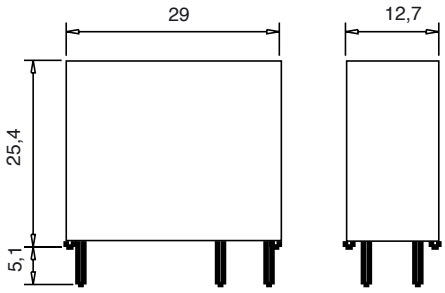
Accessories SSR Standard

Dimensions



- Compact dimensions (29 x 25.4 x 12.7)
- Combines with PLUGSERIES socket PXS / PXZ, LED indicator PLED and PRC holding clamp to a complete functioning unit.
- Fully compatible with electromechanical relays in standard design
- Control voltage 24 VAC / DC
- Rated switching current 24 VDC, 24 VAC/DC, or 230 VAC
- Up to 5 A continuous current
- Mounts onto PCB or socket
- High mounting density possible

[4] Common positive potential, negative is switched

[5] Not suitable for DC/AC version

Opto coupler, locking socket for semi-conductor relays

Single and multiple socket interface-unit

Advantages of semiconductor relays:
- Wear-free switching also with high switching frequencies
- Bounce-free switching
- No electomagnetic interferences
- High insulation-voltage between load and control circuit

Note!
The relevant ESD measures are to be observed during commissioning and maintenance (ESD endangered area)

Timers

The IT product family of electronic delay timers from Weidmüller are the optimum solution for industrial tasks.

The product family IT offers:

- Response delay (ITR)
- Wiping contact without control input (ITWo)
- Wiping contact with control input (ITWw)
- Turn-off delay without control input (ITTo)
- Turn off delay without control input (ITTw)
- Pulse generator (ITTT)
- Multifunction (ITM)
- Multifunction (ITMF)

Designation of types:

I = **I**ndustry

T = **T**imer

R = **R**esponse Delay

Wo = **W**iping contact relay with**o**ut control input

Ww = **W**iping contact relay **w**ith control input

To = **T**urn -off delay with**o**ut control input

Tw = **T**urn-off delay **w**ith control input

TT = **T**wo **T**imes

M = **M**ultifunction

MF = **M**ultifunction **F**our

Time ranges and supply voltages of delay timer relays

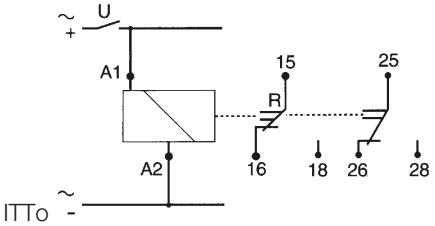
The modules' functions for 4 or 7 time can be precisely selected via the rotary button.

The multiple voltage ranges of the supply voltage allow for a wide area of use in industry (see table).

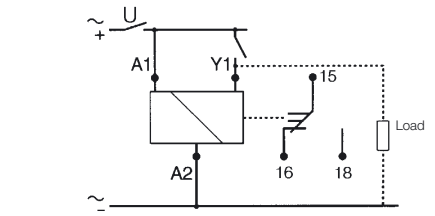
Product	Time	Range		Voltage supply
ITR	0.1s - 100h	0.1 s - 1 s	1 min - 10 min	24 VDC/24…24UVAC
ITWo, ITTT		1 s - 10 s	0.1 h - 1 h	
ITTw		0.1 min - 1 min	1 h- 10 h	
ITWw		10 h - 100 h		
ITMF, ITM				
ITTo	0.06 s - 160 s	0.06 s - 0.6 s	2 s - 20 s	24 V - 240 VAC
		0.25 s - 2.5 s	16 s - 160 s	24 VDC

Output of the timing relays

The load in every module is switched by a changeover relay (250 V, 8 A).
The multifunction module (ITM) switches both changeover relays immediately or, one changeover relay immediately and the other changeover relay delayed.



ITTo



ITR, ITP, ITWo, ITWw, ITTw,ITTT, ITMF

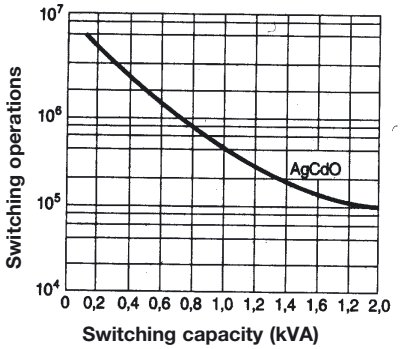
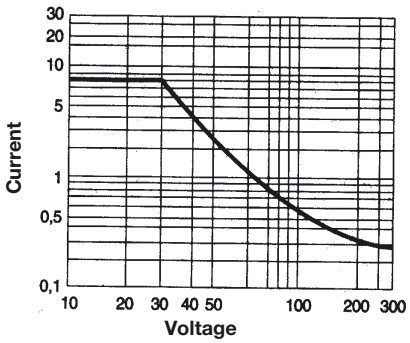
Characteristic data of output contacts

Limit values by resistive load
Service life of contacts by resistive load

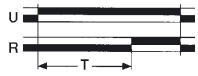




Functions of the Timers

Response delay ITR timer relay

As soon as the operating voltage is applied, the preset delay period T begins. After time period T has expired, output R connects the load.



Wiping contact timer relay without control input ITWo

When the operating voltage is applied, output R connects the load immediately. After the preset delay period T has expired, output R disconnects the load.

Wiping contact timer relay with control input ITWw

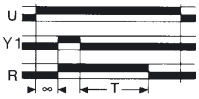
As soon as the operating voltage is applied, a pulse (e. g. 50 ms) or a voltage is applied to control input Y1. Output R connects the load immediately. After the preset delay period T has expired, output R disconnects the load.

Turn-off delay timer relay without control input ITTo

As soon as the operating voltage is applied, output R connects the load. Delay period T does not begin until the operating voltage is switched off. After delay period T has expired, output R disconnects the load.

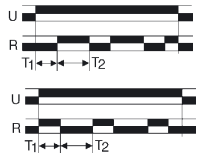
Turn-off delay timer relay with control input ITTw

After the operating voltage has been applied and control input Y1 has been activated, output R connects the load for an indefinite period of time. When the control input is opened and after the preset time period T has expired, the output disconnects the load.



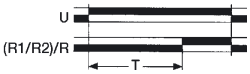
Pulse generator ITTT

The repeat cycles starts with two individually adjustable times after applying the supply voltage. There is a different starting state for each delay.



Multifunction ITM/ITMF

Function A: Response delay

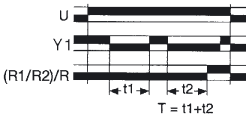


As soon as the operating voltage is applied, the preset delay period T begins. After time period T has expired, output R connects the load.

Function Ac:
Response delay and turn-off delay

As soon as operating voltage has been applied and control input Y1 has closed, delay period T begins. After time period T has expired, output R connects the load (delayed response). When control input Y1 is opened, the output disconnects the load after the preset time period has expired (delayed turn-off).

Function At:
Additive response delay

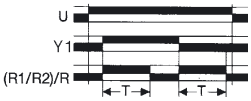


As soon as the operating voltage has been applied and delay period T has expired, output R connects the load. At control input Y1 the contact break intervals are accumulated (additive process). As soon as the operating voltage is switched off, the load at output R is disconnected.

Function B:
Wiping contact with control input

As soon as the operating voltage has been applied, a pulse (min 50 ms) or a voltage can be applied to control input Y1. Output R connects the load immediately. After delay period T has expired, output R disconnects the load.

Function Bw: Wiping function

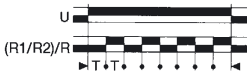


The operating voltage must be applied. As soon as a voltage is applied to control input Y1, output R connects the load for the prest time T. After time period T has expired, output R disconnects the load. As soon as the control input is opened, output R once more connects the load for the duration of time period T. After time period T has expired, output R disconnects the load.

Function C:
Turn-off delay with control input

As soon as the operating voltage has been applied and control input Y1 has been activated, output R connects the load for an indefinite period of time. When the control input is opened and after the preset time period T has expired, the output disconnects the load.

Function D: Pulse generator
(begins in the zero position)



As soon as the operating voltage has been applied, output R simultaneously switches the load alternately between the zero position and operating position for the period of the preset time T. With this function, the cycle begins at the zero position.

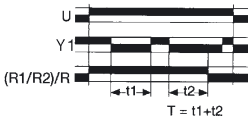
Function Di: Pulse generator
(begins in the operating position)

As soon as the operating voltage has been applied, output R simultaneously switches the load alternately between the zero position and operating position for the period of the preset time T. With this function, the cycle begins at the operating position.

Function H:
Wiping contact without control input

As soon as the operating voltage is applied, output R connects the load immediately. After delay period T has expired, output R disconnects the load.

Function Ht:
Wiping contact, additive



As soon as the operating voltage is applied, output R connects the load immediately. At control input Y1 the contact break intervals are accumulated (additive process) and when the preset delay period has expired, output R disconnects the load.

U = Operating voltage

R = Output relay or load

T = Delay

Y1 = Control input

Status LED

Two LED's show the status of the modules:

- green LED = supply voltage connected
- yellow LED = relay output active (not for ITTO)

Marking

Marking is done on a removable tag or on the marking area. The function is printed on the **front** of the module.

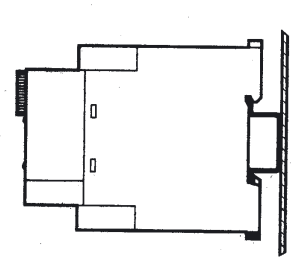
Control lamp for verifying contact

A control lamp can be wired parallel to input Y1 to show the status of control input.

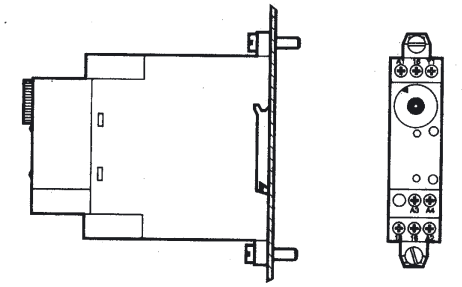
Assembly

Mount direct onto DIN TS 35 mounting rails.

on DIN rail



on panel using M4 screws



Approvals and standards

This relay has a high resistance to interference. The housing material is self-extinguishing (UL94/V0).

Manufacturing to IEC/VDE and UL/CSA approvals permit worldwide usage.

- IEC 255 static measuring relays
- IEC529 testers and test procedures
- IEC 664 regulations for high-voltage fuses for motor circuits
- IEC 801 EMC compatibility
- VDE 0110 insulation coordination for low-voltage electrical equipment
- VDE 0435 relays with fixed times

Connection technology

Clamping yoke has the following capacities:

- 2 x 1.5 mm^2 with ferrule
- 2 x 2.5 mm^2 without ferrule
- 1 x 4 mm^2 without ferrule

Dimensions IT
