

Parallel GLCD 128x64 Adapter™

Manual

All Mikroelektronika's development systems feature a large number of peripheral modules expanding microcontroller's range of application and making the process of program testing easier. In addition to these modules, it is also possible to use numerous additional modules linked to the development system through the I/O port connectors. Some of these additional modules can operate as stand-alone devices without being connected to the microcontroller.

Parallel GLCD 128x64 Adapter

The Parallel GLCD 128x64 Adapter additional board is used to connect a GLCD 128x64 display to a development system via parallel connection.

Key features:

- Parallel communication;
- Display contrast adjustment;
- 5V power supply voltage.

How to connect the board?

The Parallel GLCD 128x64 Adapter board can be easily connected to a development system via IDC10 connectors CN1 and CN2 supplied on flat cables. The additional board is connected to the development system I/O ports. A 1x20 connector CN3 is used to connect a GLCD 128x64 display. Potentiometer P1 is used for display contrast adjustment.

Here you can find examples for the Parallel GLCD 128x64 Adapter board:
